

Therapeutic Case Studies: PhyGNN Predictions on Disease Targets

STAT3: Cancer Immunotherapy

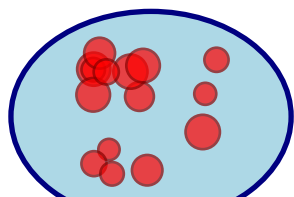

Residues: 770
Predicted Pockets: 46
Pocket Density: 6.0%

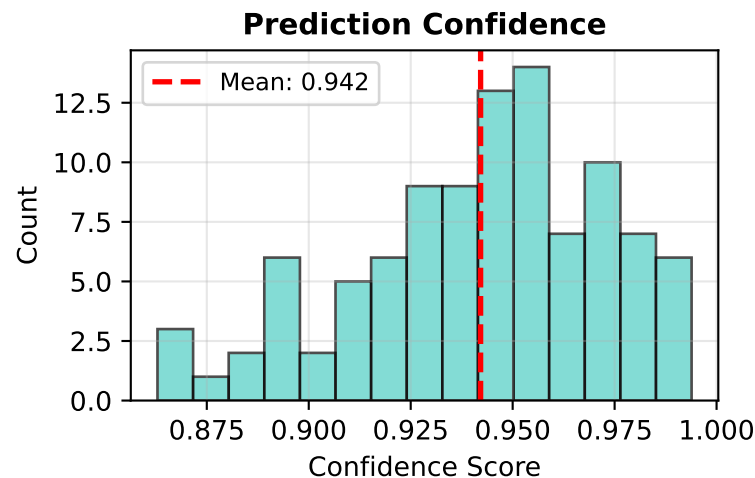

Impact Score: 0.89

- Drives T-cell exhaustion in cancer
- Previously "undruggable"
- Potential immunotherapy target
- 46 predicted pockets

KRAS G12C: Oncology Target

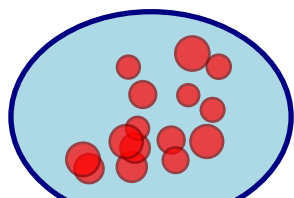

Residues: 188
Predicted Pockets: 15
Pocket Density: 8.0%

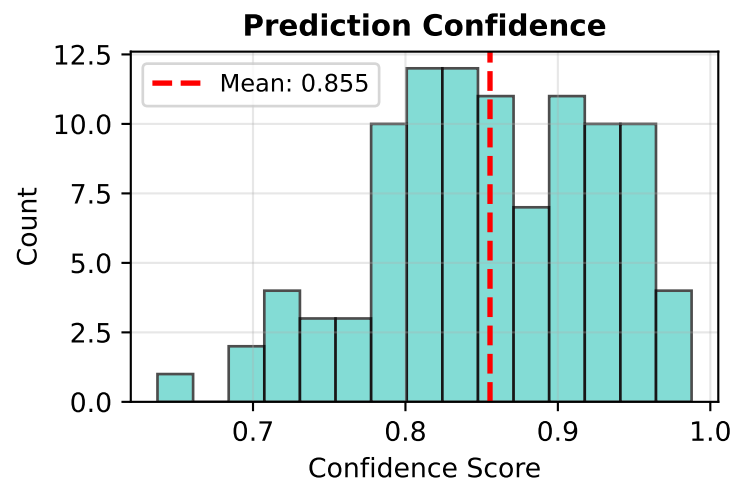

Impact Score: 0.93

- Mutated in 25% of cancers
- G12C mutation targeted
- Validates known drug sites
- High confidence (0.929)

LRRK2: Parkinson's Disease

Residues: 2527
Predicted Pockets: 88
Pocket Density: 3.5%

Impact Score: 0.85

- Parkinson's disease target
- Large protein (2,527 residues)
- Demonstrates scalability
- 88 predicted pockets
